Problem Statement

- An user Interactive Platform has to be built for booking rooms in Guest Houses available at Indian Institute of Technology Kharagpur.
- The Platform Should provide all the major functionalities which will automate and ease the process of booking and managing the guest house for both customers and staff.

- 
- 
- Online booking software allows guest houses to take bookings 24/7, which increases revenue of the owner. Also guests can easily book their stay without having to call or email the guest house.
 - Guests can easily view availability, room types and prices this makes easier for them to make informed decisions about their stay
 - This will automate administrative tasks such as sending confirmation mails, cancellation mails and updating availability calendars.

Use case Diagram

- By entering correct username and password both guests and admins can have access to the website.

The screenshot displays a web browser window with the address bar showing '127.0.0.1:5000'. The website is titled 'Kharagpur Guest House Booking' and features a navigation menu with links for Home, About, Contact Us, Login, and Register. The main content area is divided into two sections: 'Sign in' and 'Welcome!'. The 'Sign in' section contains input fields for 'UserName' and 'Password', and a 'Sign In' button. The 'Welcome!' section includes the text 'Create an account and book your room !' and a 'SIGN UP' button.

Registration page

- Registration form where new user or admin need to enter the personal details

Availability: ☐ 9 ☐ 10 ☐ 11 ☐ 12 ☐ 13 ☐ 14 ☐ 15

- This page displays the total individual costs the user need to pay for confirmation of Booking.

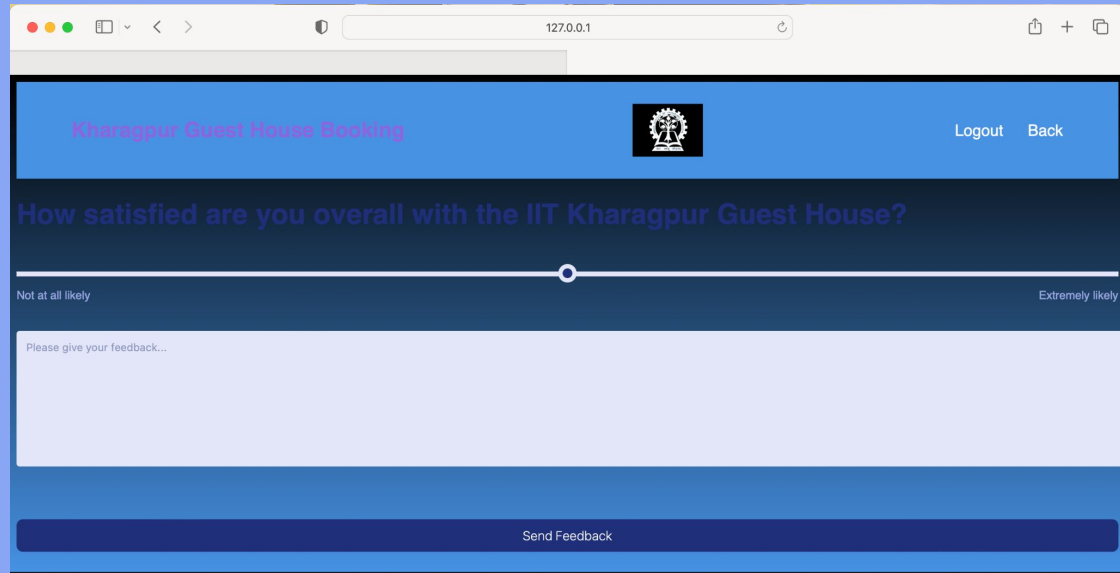

- Viewing all the bookings made by the user and their current status.They can cancel and provide feedback through this page.

- User can submit their feedback multiple times before 1 month after checkout date and this feedback will be updated to the admins of the guest house

The screenshot shows a web browser window displaying the feedback page for IIT Kharagpur Guest House Booking. The page has a blue header with the text "Kharagpur Guest House Booking" on the left, a logo in the center, and "Logout" and "Back" links on the right. Below the header, the main question is "How satisfied are you overall with the IIT Kharagpur Guest House?". A horizontal slider is positioned below the question, with "Not at all likely" on the left and "Extremely likely" on the right. A text input field with the placeholder "Please give your feedback..." is located below the slider. At the bottom of the form is a "Send Feedback" button. The browser's address bar shows "127.0.0.1".

Software Specifications

Our Approach

Flask

SQLAlchemy

smplib

Python Environment

Why did we choose flask ?

Easy to implement

It is a lightweight and flexible web framework for python. It provides only the core features required for web development.

Extensible

Flask is highly extensible, i.e.. It can add third party extensions to enhance its functionality. Eg..
Flask-SQLAlchemy
Flask-login

Modular , Great documentation

We can get started with it quickly and easily and it is designed to be modular, i.e.. can easily add or remove components as needed.

SQLAlchemy

It provides a powerful ORM layer that allows developers to interact with databases using python classes and objects.

smtplib

This module provides a simple and convenient way to create and send email messages using SMTP. Also supports authentication mechanisms such as LOGIN to securely send emails from authorized email accounts.

Challenges **faced**

- Managing Database classes
- Integrating **smtp**lib module with main API for sending mails to users
- Implementation of Room Availability and Queuing system
- Sending various verification, confirmation and cancellation mails to Users.
- Automated booking Confirmation of user in queue for a room if it is available

04

Future Scope

Future Scope

- Handling multiple rooms of same room type within the database
 - Handling multiple food options and amenities at the same time
 - Viewing the payment Details with the paymentid by admin.
 - Access to all the details of users and Admins only to the root admin.
 - Updating information of guesthouses by admins.
-
